

Workshop with Client

Date: 1/1/2022

Time: 9am-10am ET

Client team: List members of the client team at the workshop

PWC team: List members of the PWC team at the workshop

Intro (5 min): Manager introduces the team, and each member shares a quick intro on their experience in the compliance/risk space and the integration with digital solutions.

Background (5 min): Manager goes over the goals of the workshop and what the team hopes to gain by the end of the session.

Notes:

1. Why does the client need an ERP upgrade? Pain points, drivers
2. What compliance systems does the client currently have? Current state discovery, risk/controls/compliance
3. What requirements does the client have for the enhanced system? Future state/success criteria

Background about client:

- International Manufacturing company, specializing in building materials and plumbing equipment -> physical, regionally distributed operations
- Consolidating 4 regional systems into one platform -> 4 different configurations
- Mentioned pain points are user access controls and SOX compliance
- Three workstreams: security, controls, transformation

Questions (40 min)

Security/user access control questions:

1. Walk us through how user access is currently provisioned, reviewed, and revoked across your 4 regions, is this managed centrally or locally?
2. Do you currently have a defined process for identifying and remediating segregation of duties conflicts? How are these conflicts tracked today?
3. How are privileged/admin-level access rights governed, and who approves elevated access requests?
4. Have any of the 4 regional systems has audit findings or exceptions related to user access in the past two years?
5. What does your current user access review process look like and how often does it happen?

Control/SOX questions:

1. What internal controls over financial reporting exists today and are they standardized across all 4 regions or do they vary locally?
2. Are your key financial controls manual, automated, or a mix? Which manual controls are the biggest pain points?
3. How do you currently test and evidence controls for SOX compliance, and how long does the process typically take each cycle?
4. Have there been any recent SOX control deficiencies or audit findings the new system needs to address?

5. Who owns SOX compliance internally and how do they currently collaborate with IT/ERP teams when control needs to change?

Transformation questions:

1. What does success look like for this program from leadership's perspective, how will you measure whether the ERP consolidation delivered on its objective?
2. Have previous large-scale system implementations at your company faced delays, budget overruns, or adoption challenges? What caused them?
3. Is there a target go-live date and are there any hard constraints like fiscal year-end or board commitments tied to that timeline?
4. How aligned are the four regional leadership teams on this consolidation? Are there any regions more resistant to change than others?
5. What governance structure is in place to make decisions and resolve conflicts during this program?
